

# WHITEPAPER

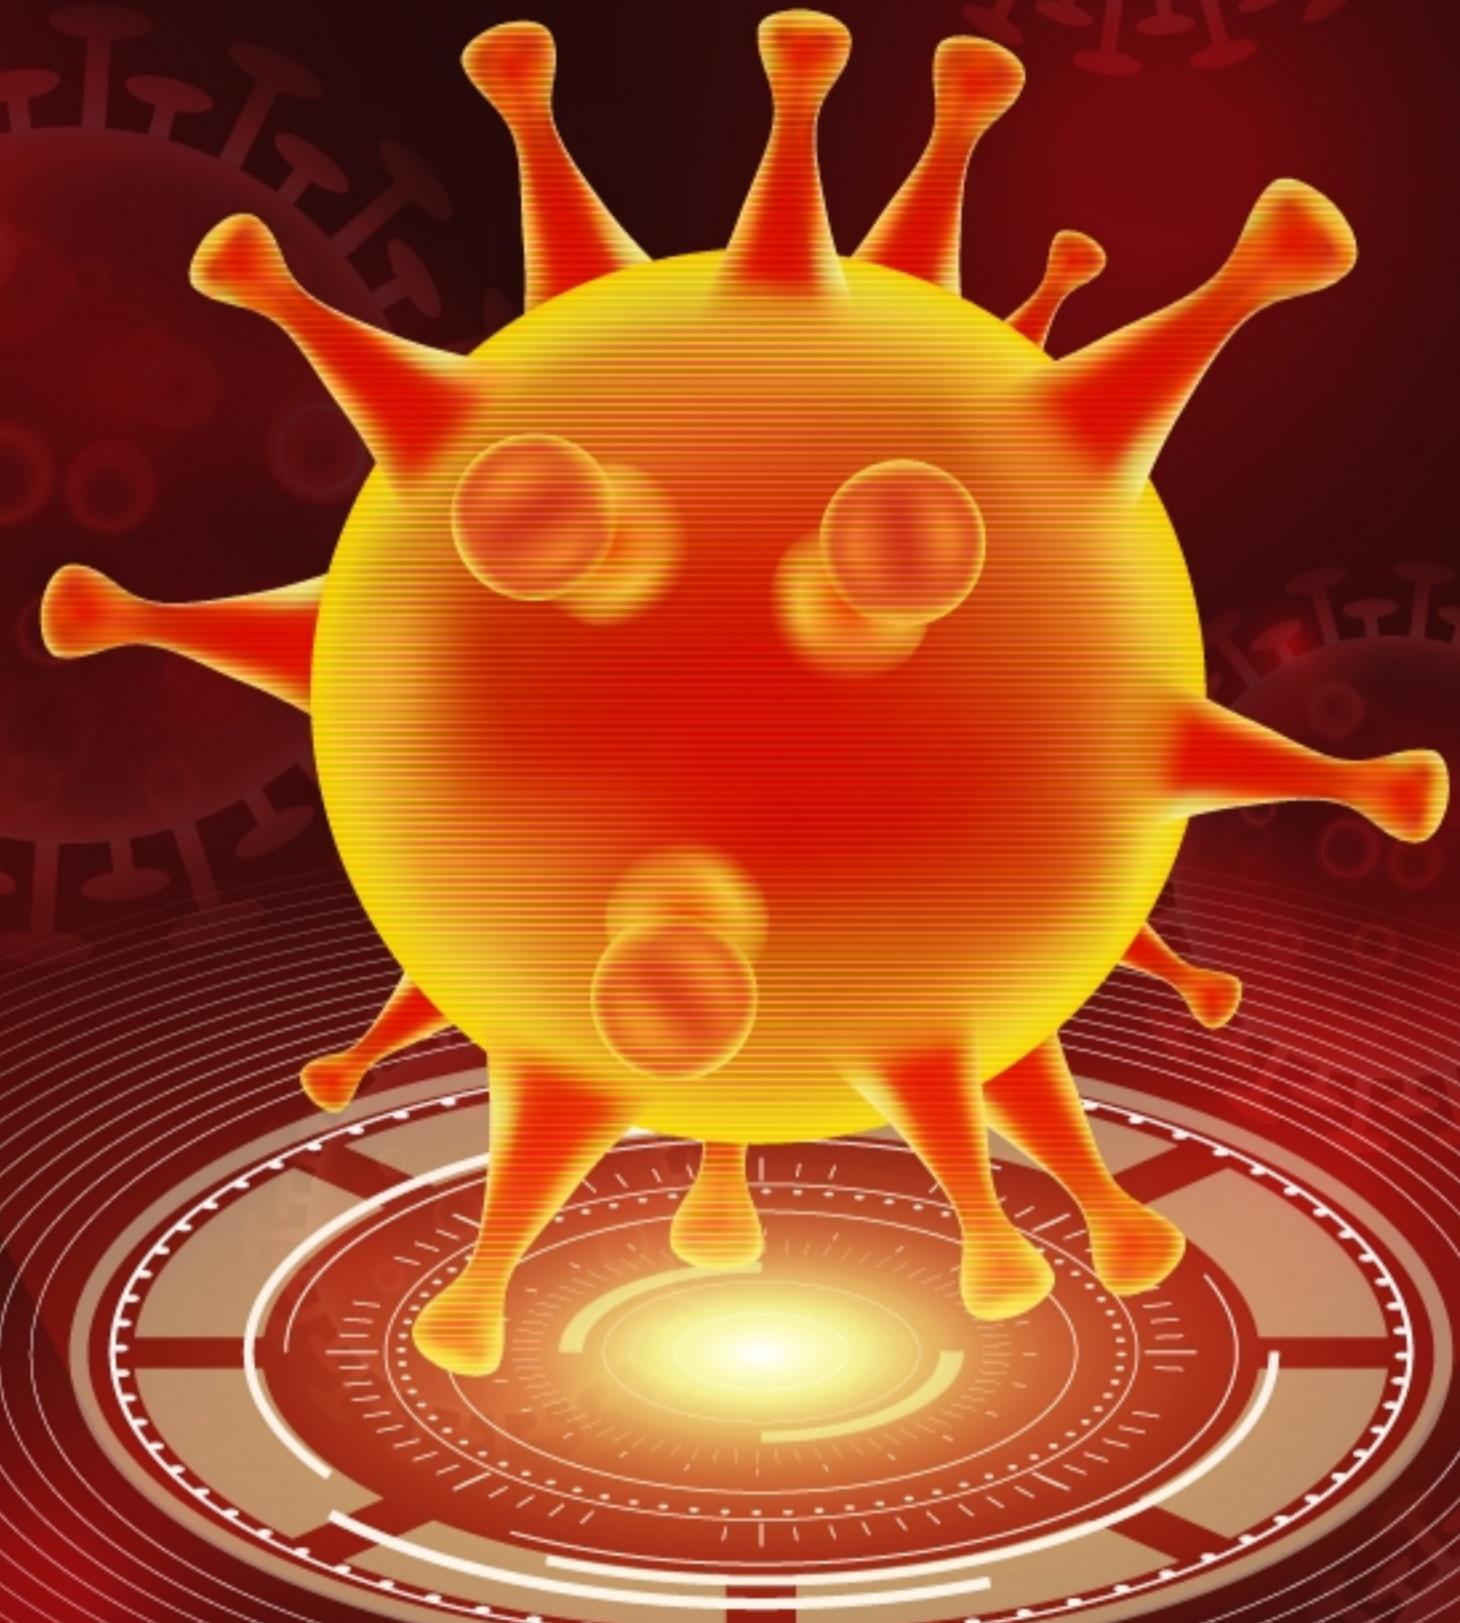

## CORONA CRYPTO

# OVERVIEW OF THE EPIDEMIC

## WHAT IS CORONA?

Corona is a large family of viruses, of which some strains are capable of causing disease when infecting from animals to humans, others infect only and survive in animals including camels, cats and bats. Sometimes, the corona virus evolves from animals in order to transmit to humans and then spreads from person to person like the Middle East Respiratory Syndrome (MERS) and Severe Acute Respiratory Syndrome (SARS).

At present, the corona virus strain causing an epidemic in Wuhan (2019-nCoV) is a new strain that has never appeared in humans and is likely to transmit from person to person.

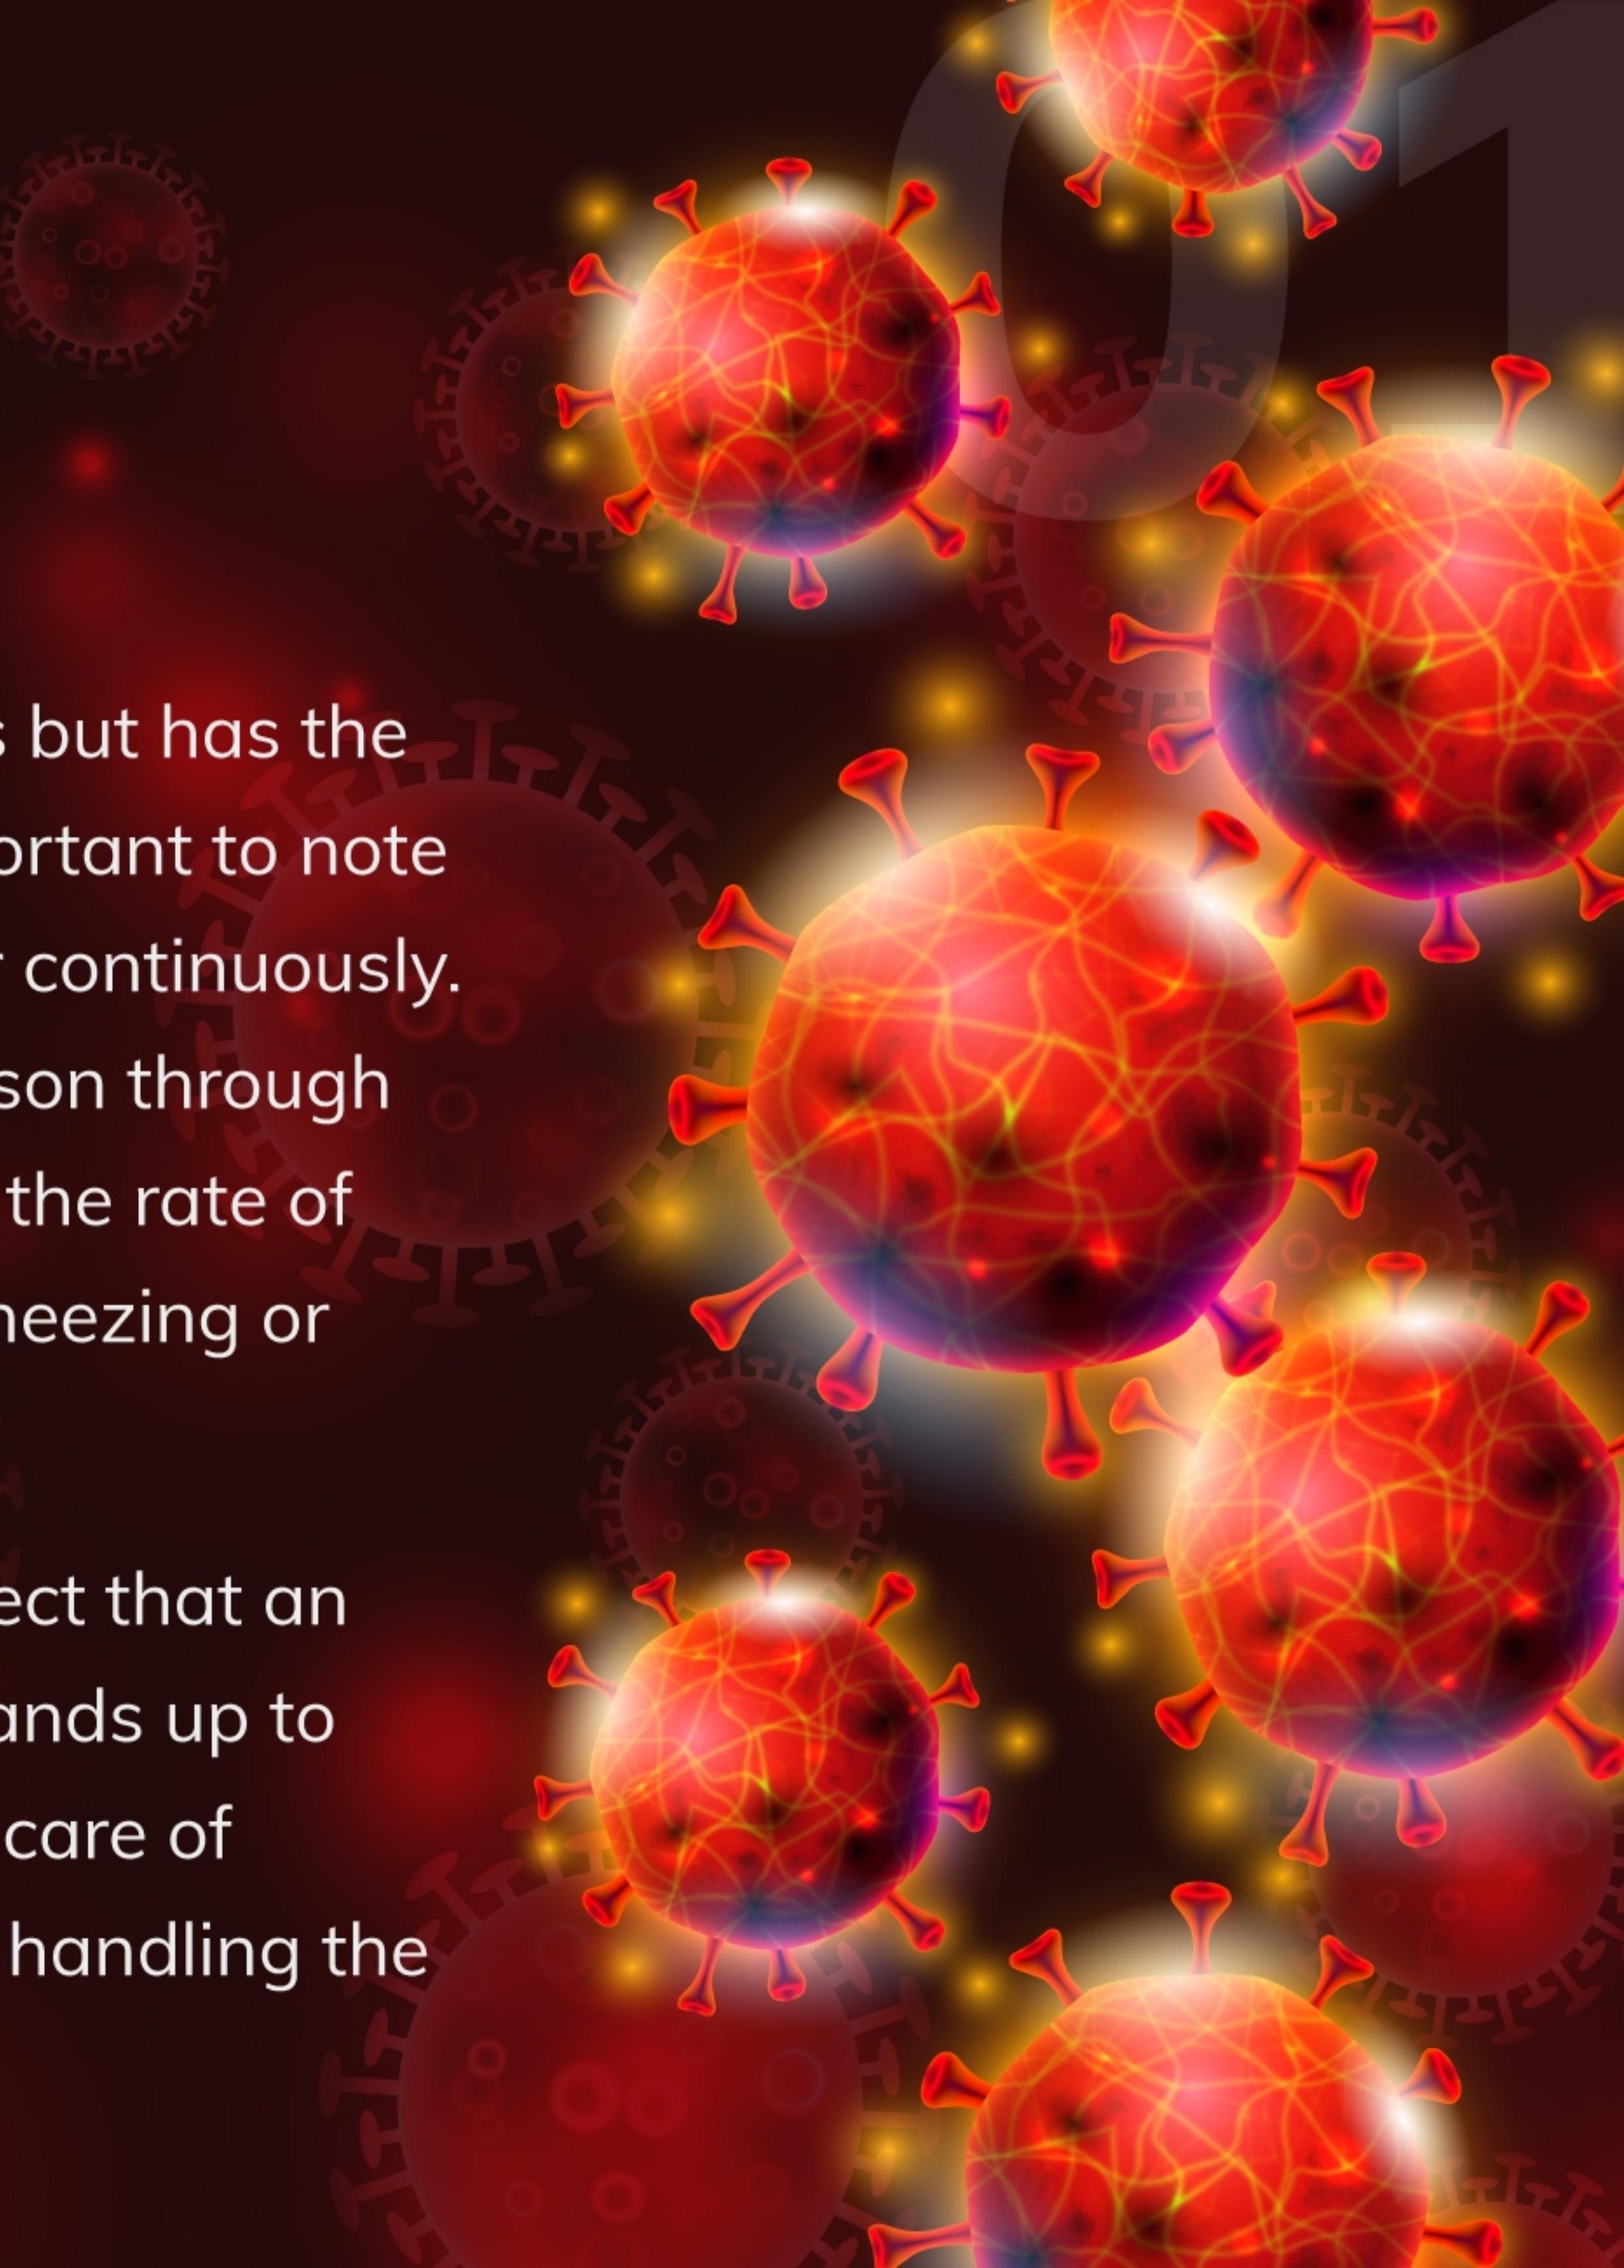

# OVERVIEW OF THE EPIDEMIC

## WHAT IS CORONA?

The virus initially originated from animal sources but has the ability to spread from person to person. It is important to note that the spread from person to person can occur continuously.

In humans, the virus spreads from person to person through contact with infected body fluids. Depending on the rate of transmission by the virus strain, the coughing, sneezing or shaking hands can cause people to exposure.

The virus can also be spread by touching an object that an infected person had touched, then putting the hands up to their mouth, nose, and eyes. The persons taking care of patients may also be exposed to the virus when handling the patient's waste.

# OVERVIEW OF THE EPIDEMIC

## NEGATIVE EFFECTS

Currently, the corona virus is widespread in China and according to Chinese experts, about 45 million Wuhan people are isolated from the outside world. In order to prevent the epidemic from raging, Beijing has delayed the opening of stock markets, the stock price has plummeted due to the impact of the Corona epidemic.

As a deterrent measure, the G-20 is about to launch a USD 5,000 billion bailout to save the global economy.

# OVERVIEW OF THE EPIDEMIC

## NEGATIVE EFFECTS

Beijing has injected RMB 1.2 trillion (equivalent to USD 171 billion) into the financial system to maintain the operation of the domestic currency market and banking system.

- The US has approved a budget of USD 2,200 billion to bail out the economy against Wuhan Corona pandemic
- Germany has launched a bailout of USD 614 billion (500 billion Euro)
- The UK has launched a bailout of USD 366 billion (300 billion pounds)
- Singapore has launched a bailout of USD 33 billion

# OVERVIEW OF THE EPIDEMIC

## NEGATIVE EFFECTS

The national governments around the world will in turn launch the bailouts to their own countries if their reserve budgets allow them to do so.

In addition, the import tax of goods that are important in the battle with the corona virus epidemic is also cut.

The world economy lost more than USD 1,000 billion in three months after the outbreak of Wuhan Corona epidemic, including: Securities, Tourism, Manufacturing, and Services.

It is forecasted that the global economy will continue to be worst-affected in the history of global epidemics

# OVERVIEW OF THE EPIDEMIC

## SOME EPIDEMICS IN THE PAST

- **SARS outbreak**

The severe acute respiratory syndrome is a human respiratory disease caused by a virus called the SARS virus (SARS-CoV), a strain of the coronavirus. The SARS broke out in Hong Kong, spread globally and almost became a pandemic, with 8422 cases and 916 deaths worldwide (10.9% of deaths).

- **Ebola pandemic**

Ebola is not a strange name. This is an epidemic originating from Africa. West Africa was the most affected area with 70% of the population infected. In addition, this epidemic also strongly broke out in many different areas. According to statistics, Ebola appeared to have taken the lives of nearly 7000 people.

# OVERVIEW OF THE EPIDEMIC

## SOME EPIDEMICS IN THE PAST

- **Influenza H3N2**

The influenza epidemic in Hong Kong occurred from 1968 to 1969 caused by the influenza A H3N2 virus, with 1 million deaths in affected areas, including Asia, Australia, Europe and the US.

- **Cholera**

The third cholera occurred from 1852 - 1860, originating from India, then spreading throughout Asia, Europe, North America and Africa. This pandemic had killed 1 million people.

- **Cocoliztli Pandemic**

From 1545 to 1548, the Cocoliztli pandemic almost wiped out Mexico when causing 12 -15 million deaths in this country, equivalent to 80% of its population.

# OVERVIEW OF THE EPIDEMIC

## SOME EPIDEMICS IN THE PAST

- **Influenza H2N2**

The Russian flu epidemic caused by the influenza A H2N2 virus is also a notable event because this was the first pandemic to hit Europe after the railways were completed. In 1889, the railways of 201,168 km in length connecting European cities made the epidemic more easily spread. This epidemic killed one million deaths.

From 1957 to 1958, the H2N2 epidemic recurred and took more than 2 million lives in affected areas including China, Singapore and the US.

- **Tuberculosis**

The tuberculosis had broken out over the world and caused 1.3 million deaths. This epidemic affected to one third of the world's population.

# OVERVIEW OF THE EPIDEMIC

## SOME EPIDEMICS IN THE PAST

- **Plague**

The plague in Persia caused 2 million deaths from 1772 to 1773. For the first time in the Persian Gulf, quarantine measures were taken to contain the epidemic. However, due to the delayed quarantine, 250,000 people died in Basra in 1773. The plague also spread to India and Bahrain when transmitted from different animals to humans.

- **Malaria**

Malaria is also one of the oldest epidemics, it is recorded to appear more than 4,000 years ago. Malaria is caused by the Plasmodium parasite, which parasitizes both mosquitoes and humans.

For American Civil War only, many statistics had recorded that there were nearly 1.5 million cases of malaria, and more than 10,000 deaths among them. Today, malaria is still a painful problem for mankind. Every year, from 350 to 500 million cases of malaria are recorded in Africa.

# OVERVIEW OF THE EPIDEMIC

## HELP FROM THE COMMUNITY

In order to cope with the pandemic of the century, the Chinese Government called for international help and received support in cash and goods from Korea, Japan, the UK, France, Turkey, Indonesia, UNICEF.

... in fighting against the acute respiratory infection caused by new strain of Corona virus (nCoV).

South Korea plans to support medicines for treating the disease, including more than 2 million face masks and other medical relief items, including 200,000 clothes and goggles for people in the epidemic areas who are coping with the acute respiratory infection caused by the new strain of Corona virus.

# OVERVIEW OF THE EPIDEMIC

## HELP FROM THE COMMUNITY

Japan was one of the first countries joining hands to fight against the Corona epidemic, and early decided to provide relief goods to the epidemic area to help cope with the acute respiratory infection caused by the new strain of Corona virus. Japanese people donated 1 million face masks. Toyota Motor Company supported RMB 10 million (nearly USD 1.4 million) to purchase medical supplies. Sumimoto Pharmaceutical Company of Japan supported RMB 1 million (nearly USD 143 thousand) to purchase medicines for treating nCoV-infected patients.

European Union (EU) supported 12 tons of medical protective equipment. Germany has transferred 10,000 medical protective suits to support Chinese functional forces in the process of deploying and responding to the new strain of Corona virus in the epidemic center area. Egypt also provided 10 tons of preventive medicine equipment, supplies and tools to help cope with the acute respiratory infection epidemic.

# OVERVIEW OF THE EPIDEMIC

## HELP FROM THE COMMUNITY

The United Nations International Children's Emergency Fund (UNICEF) has provided 6 tons of goods, including face masks and protective clothing for health workers.

The Bill and Melinda Gates Foundation donated US \$ 10 million to help prevent the epidemic caused by the Corona virus and readily prepared for Africa in the event of occurring the epidemic.

Vietnam has decided to provide aid with medical tools and goods worth about USD 0.5 million to share with people who are facing the pneumonia pandemic. The Vietnam Red Cross has mobilized the aid with goods of USD 100,000 and 7 Northern border provinces also have had appropriate ways to support the people in the epidemic areas, especially the provinces on the border of the two countries.

Jack Ma, the founder of Alibaba, is also believed to contribute RMB 100 million, equivalent to USD 14 million to help hospitals in Wuhan purchase necessary equipment for preventing the epidemic.

# OVERVIEW OF THE EPIDEMIC

## HELP FROM THE COMMUNITY

Through the support of Vatican pharmacies and Christian communities in Italy, about 600,000 to 700,000 face masks were sent to the epidemic areas by the Vatican.

Large corporations such as Baidu, Tencent and ByteDance have spent RMB 800 million, equivalent to USD 115 million to research and develop the treatment for the pneumonia epidemic as well as coordinate with the government to find a solution to the current pandemic situation.

Huawei company has also contributed to help the city with many Corona-infected cases build a field hospital, Huoshenshan Hospital. Even fashion houses such as LVMH and Kering respectively contributed USD 2.3 million and USD 1 million to the campaign to prevent the acute respiratory infection caused by the new strain of Corona virus.

Anta Sports brand has also donated RMB10 million, equivalent USD 1.4 million, to provide medical supplies for the epidemic area in Hubei province.

# OVERVIEW OF THE EPIDEMIC

## INADEQUACIES IN CHARITABLE ACTIVITIES

- **Lack of transparency**

It can be seen that the Corona epidemic is affecting greatly across the globe and all countries over the world have joined their hands to fight the epidemic off. However, many charity scandals have lost the trust of donators in the community.

- **Lack of trust**

There have been many repeated stories about funds being misused by charities, and other stories when they took excessive actions in trying to seek contributions.

# OVERVIEW OF THE EPIDEMIC

## 1.5 INADEQUACIES IN CHARITABLE ACTIVITIES

- **Corruption**

Corruption can be a major challenge for aid organizations, and funds sent to affected countries do not always reach the intended recipients. Some charities are also accused of lacking transparency, or being unable to clarify the amount paid for their administrative activities, or refusing to disclose the amount they have in reserve funds. The bonuses for senior executives also make sponsors indignant in many circumstances.

Individuals and organizations around the world always wish to contribute a part of their efforts to fight against the Corona epidemic. They act through charitable funds, calling for donations, distributing food, foodstuff, money, and wealth to those in need. However, the transparency in organization and distribution of assets still cannot be completely public, there are still greedy people who take advantage of and seek profit from the contributions. Thus, how can we make transparent and give trust to raise funds and contribute to the fight against the Corona epidemic?

# BLOCKCHAIN TECHNOLOGY SOLUTION

## WHAT IS BLOCKCHAIN?

Blockchain is a chain of blocks containing information. From its name says it all - block and chain.

Blockchain is called a main accounting book (ledger) of a company, in which all of the company's money-related activities are closely monitored.

In this circumstance, Blockchain is a ledger operating in the field of technology, and the stored data is digital data.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## BLOCKCHAIN TECHNOLOGY SOLUTION

Blockchain is used to store information in connected information blocks. It is managed by everyone participating in the system

- **Corruption**

Instead of an separate third party like the state or central bank. It also allows the secure transmission of data by a complex encryption system, and expanded from time to time.

- **Corruption**

Everyone can follow the path of data in blockchains, from one address to another and can do statistics for the entire history on such address.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## BLOCKCHAIN TECHNOLOGY SOLUTION

- **Smart Contracts**

Smart contracts are digital embedded by an if-this-then-that(ITT) code in the system.

Allowing them to execute themselves without third parties.

Blockchain does not need a third party to join the system.

It ensures that all participants are aware of the contract details and the terms are automatically fulfilled once the conditions are ensured.

# CORONA-CRYPTO PROJECT

## MISSIONS AND GOALS

- **Missions**

Creating a transparent Blockchain asset during the time of fighting with the pandemic and after the pandemic. A type of asset circulating on the Blockchain space of Ethereum's smart contract platform.

- Helping the international investment community to pay more attention to issues of the Society.
- Helping the global community to store assets safely while the world restricts cash to avoid infection
- Helping the community to make a profit at home through the growing profits of Blockchain assets

# CORONA-CRYPTO PROJECT

## 3.1 MISSIONS AND GOALS

- 
- Helping sponsors to make charitable donations for poor countries to have more budgets to prevent the pandemic
  - Helping to fight off the impact of the Corona virus on society: by transparent mechanisms, the donors can know how their money is optimized. This will make them trust the project and thereby, give more trust to the nonprofit activities.

# OVERVIEW OF THE EPIDEMIC

## MISSIONS AND GOALS

- **Goals**

Communities join hands to help the world overcome the Crisis, reduce the losses of death and economy.

- Developing hospitals and health care centers:

Amid the scarcity of medical facilities in the endemic areas, Corona commits to support the organizations and governments to open hospitals and health care centers by raising funds and using them transparently.

- Developing Educational Institutions:

The goal of ensuring no mistakes will help Corona focus on improving the educational facilities and propagandizing on how to prevent Corona.

# OVERVIEW OF THE EPIDEMIC

## MISSIONS AND GOALS

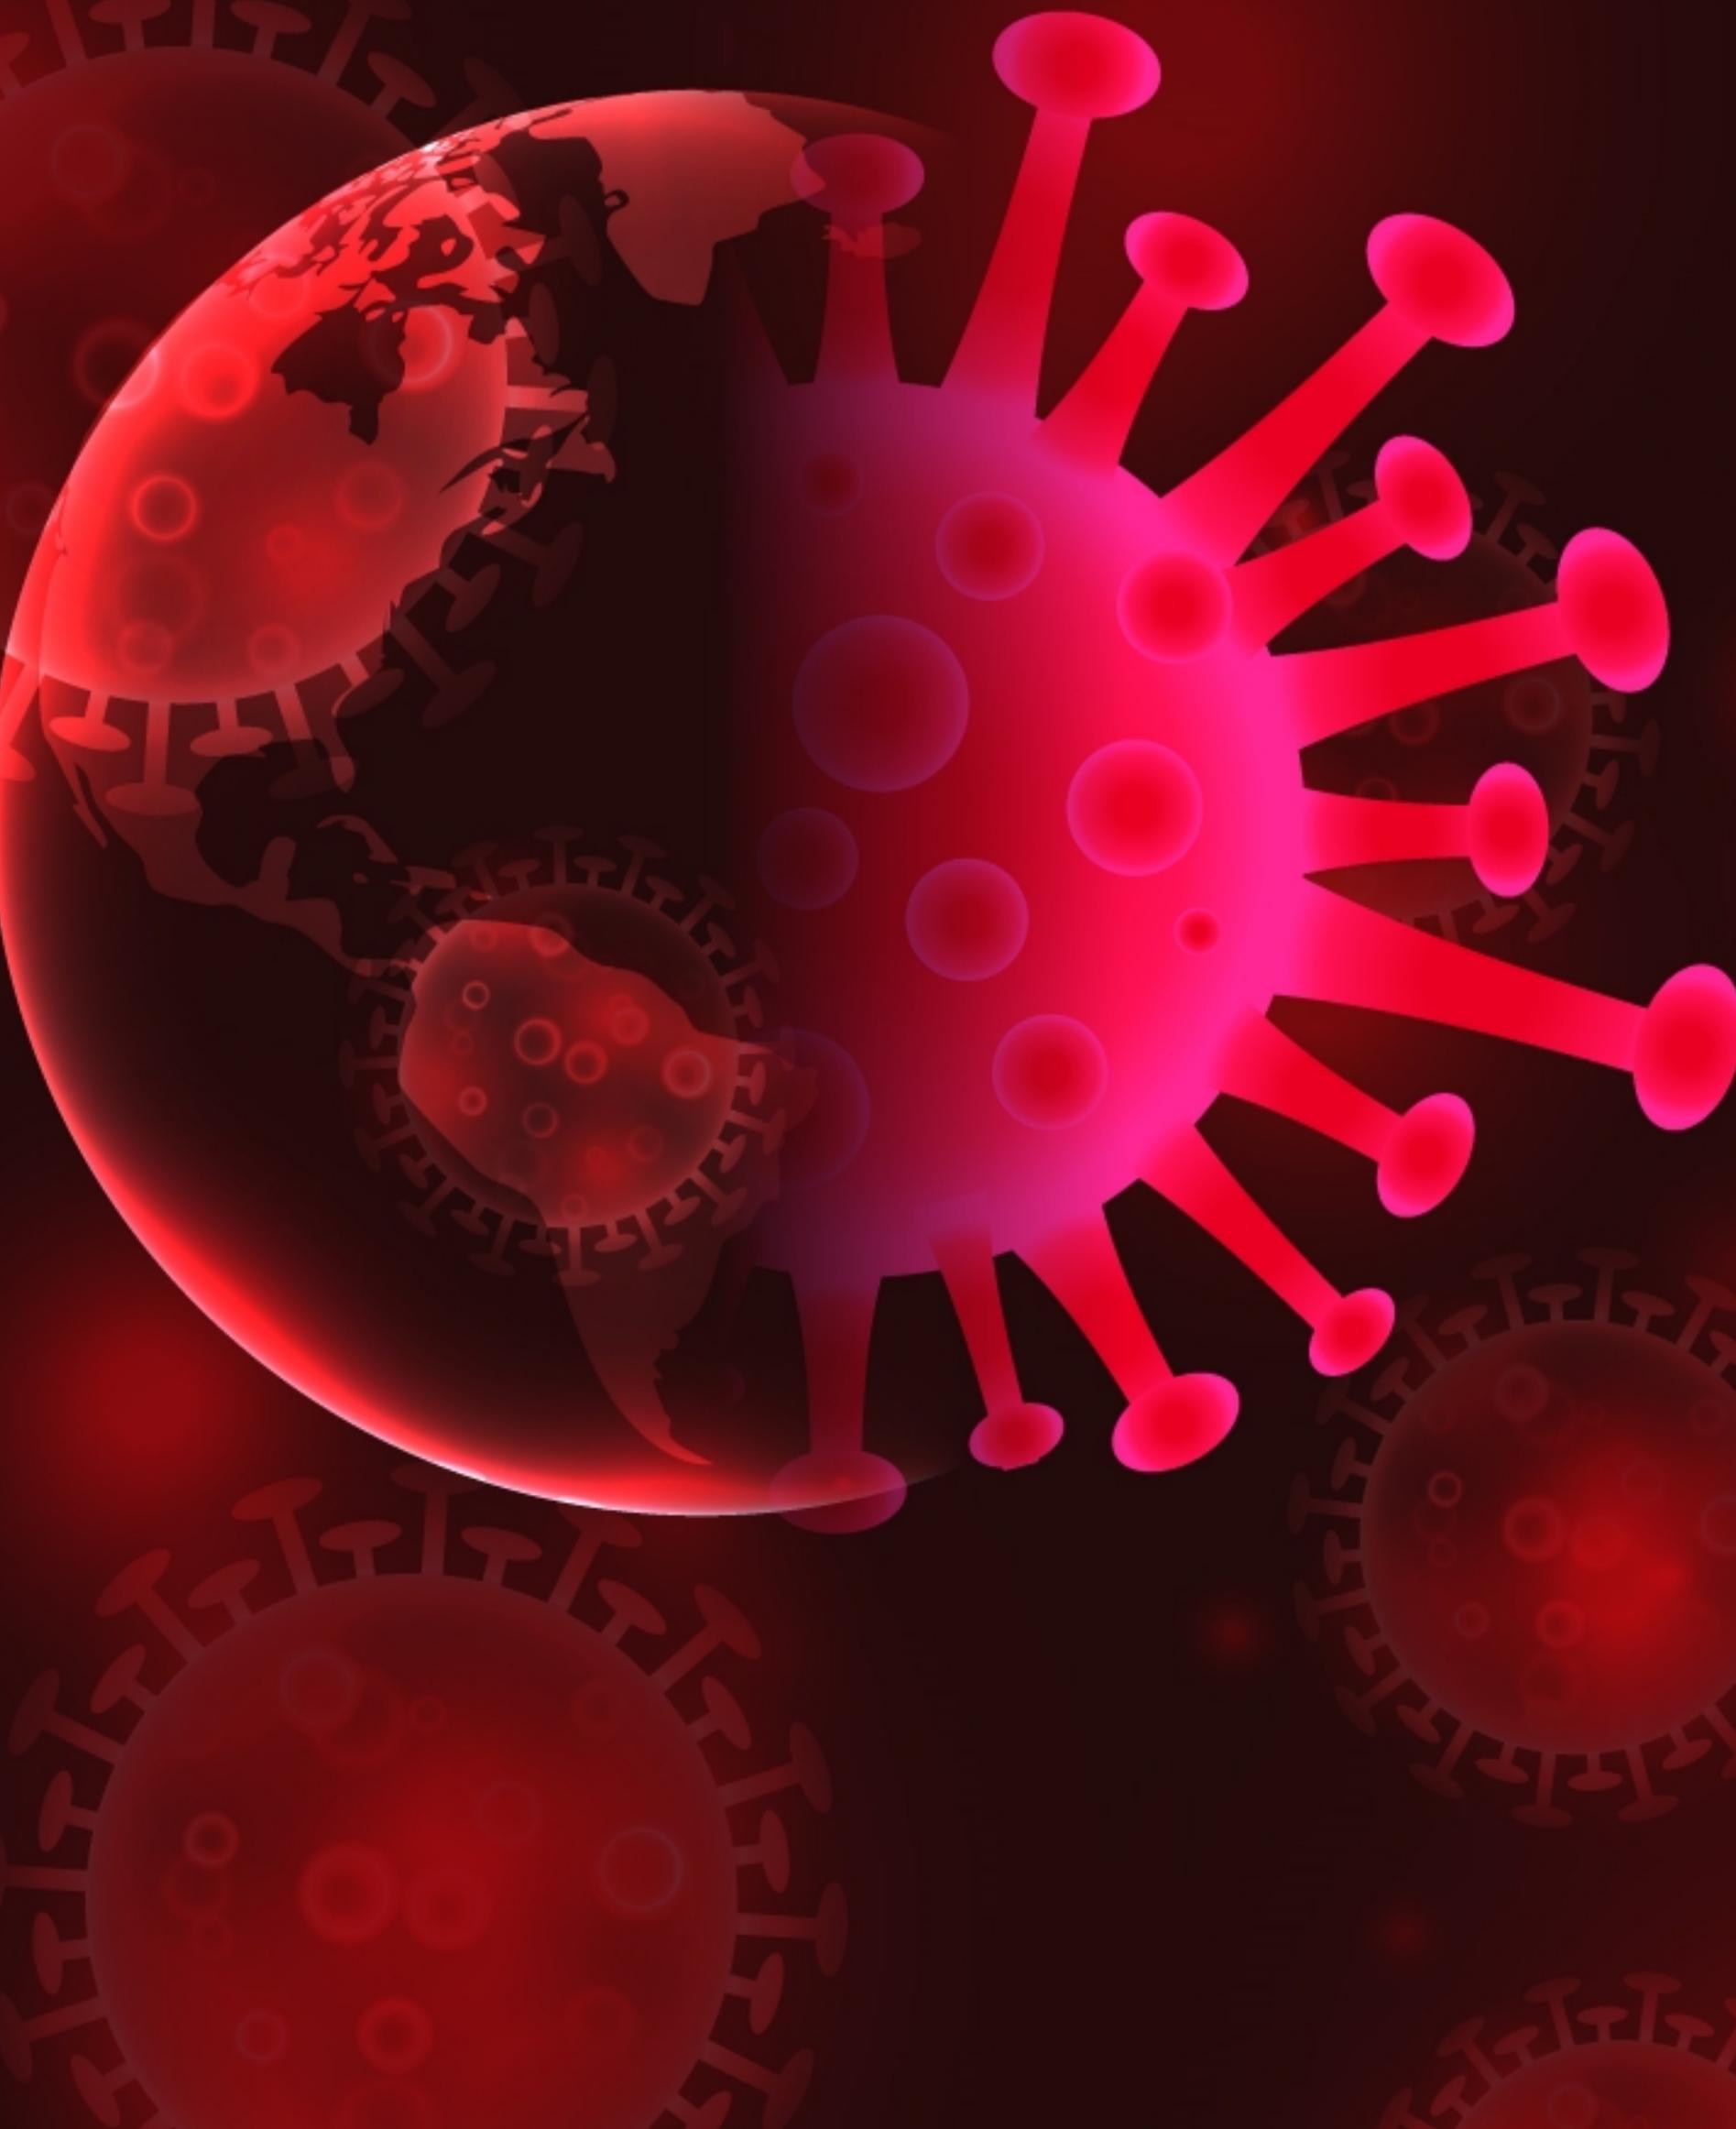

- Finding out Vaccine:  
Corona focuses primarily on studying and testing to quickly find out Corona Vaccine through blockchain-based fundraising.
- Premise of the epidemic prevention fund:  
The epidemic is a leading risk, in addition to Corona, the project will build a system that allows to create campaigns, call for capital to help fight off other epidemics such as H5N1, H10N8, Ebola, ....

# BLOCKCHAIN TECHNOLOGY SOLUTION

## OUR SOLUTION

Creating a new application of assets on the advanced blockchain technology - a type of asset that is possible for all mankind to contribute to the development and resolution of the world's crisis problems. The amount of assets created based on the global population is currently 7,737,900 people.

The amount of assets created on the Blockchain platform with the transparency of smart contracts will help every person in the world can own it and contribute to the development of the world to restore the economy, social life during and after the Corona pandemic.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## OUR SOLUTION

A new technology is booming, bringing the innovation, transparency and unique, and that is blockchain. Corona is a project that applies Blockchain technology to create an unchanged directional algorithm chain; make fund-raising data transparent through on-chain public archives; eliminate charitable organizations which are separate and unreliable to replace them with a divisional system - unchangeable and dispersible in preventing and stopping the Corona virus from spreading globally.

- **Increasing the Transparency**

The lack of transparency in donations to prevent the epidemic has created suspicion. In this case, the Corona project will ensure the transparency when contributions are used because all transactions are publicly recorded and cannot be modified in the ledger of the controller.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## OUR SOLUTION

- **Smart contacts**

In addition, the use of smart contracts can ensure that the money is not spent for purposes other than those set out in the previous contracts.

- **Traceability**

On the other hand, traceability is the process of identifying the origin of medical equipment, necessities provided to epidemic areas. The Corona Project will build a system that illustrates in detail each transaction. in this system, you can actually track your contribution, and confirm its expenditure for people in the Corona epidemic areas.

This system is more transparent than any traditional charity system. Tracking has become easier for the donators. They can track the influence of their contributions, who the recipients are, how they are, and the positive effects of their contributions.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## OUR SOLUTION

- Technology To create Token Assets

NUMBER

**7,739,879,999 NCOR**

TOKEN CODE

**NCOR**

### — NOTE:

The number of asset codes created equals the existing world population. The number of Token codes NCOR will be reduced (Burned) when the number of people in the world died from the epidemic. With every death, there will be 100 tokens burned, the amount of assets will be reduced over time until the world overcomes the Corona pandemic.

Data about the epidemic will be updated from reliable sources of WHO organization

(<https://www.who.int/emergencies/diseases/novel-coronavirus-2019/situation-reports>)

# BLOCKCHAIN TECHNOLOGY SOLUTION

## CONTRIBUTIONS TO THE COMMUNITY

Corona-Crypto: A platform to help our community fight off the epidemic

Our team of experts has investigated and discovered the great potential of blockchain in dealing with the corona virus. We have developed an user-friendly and accessible solution that helps connect people all over the world to fight off the global pandemic.

- Making the best of blockchain technology to create a reliable, efficient and mistake-free donation system
- Eliminating the intermediaries in donation to prevent the epidemic
- Creating a public data source to query donations since they are transferred from donators to beneficiaries

# BLOCKCHAIN TECHNOLOGY SOLUTION

## CONTRIBUTIONS TO THE COMMUNITY

- Bringing honest non-profit individuals or organizations to the Corona platform and creating transparent fund-raising campaigns using smart contracts.
- Creating a simple control platform for the government and its coordinators to review the organization's financial transactions.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## POTENTIAL BENEFITS

- **Optimal Transparency**

Every transaction can be verified on the blockchain very simply. The more transparency and accountability are the more credibility for donators is and this encourage them to make more donations, and the credibility and reputation of the charity will also increase.

- **Tax and Fee Cuts**

For example, a donator in the US, if such person uses Corona coins to donate, then the beneficiary will receive the full value of such donation (not taxable). Moreover, the donator will have the right to request higher tax deductions from the government agencies.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## POTENTIAL BENEFITS

- **Global and Decentralized**

Corona is a highly decentralized blockchain network that is not dependent on any centralized governments or organizations. Therefore, funds raised can be transferred directly from the donator to the beneficiary.

- **Digital Agreements**

Corona makes it easier to store and share digital data, and it can also be used to ensure that documents and contracts are not modified without the consent of participants.

- **Cost savings**

We simplify the process of charity management, automate stages in the process and save overall costs by reducing intermediaries..

# BLOCKCHAIN TECHNOLOGY SOLUTION

## CORONA CRYPTO PLATFORM

Corona is a blockchain-based platform and provided by Corona tokens.

This platform provides an ecosystem of services against the Corona pandemic through an easy-to-use interface, nonprofit community connection, and allowing full transparency and traceability of contributions, donators, charities, beneficiaries, ...

# BLOCKCHAIN TECHNOLOGY SOLUTION

## CORONA CRYPTO PLATFORM

In order to simplify the donation process and increase the adoption of Corona-Crypto, we will integrate a number of integrated wallet services for easy storage and donation, tracking for transparent donations and smart contract forms to run the fund-raising campaign.

In order to create an account on the Coronana platform, charities shall register and be verified to donate. Combine a unique address and allow tracking of donations and check the usage of money.

After registration and verification, the donators can share some information about the epidemic area (for example: general information, official address, donations received, usage of capital and up-to-date information of the epidemic) through public records.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## CORONA TOKEN

Corona will allow sponsors to convert major cryptocurrencies into Corona Token at current exchange rates, while the integrated wallet will allow every registered user to easily manage and store tokens without using external services.

Donators can convert major cryptocurrencies such as Bitcoin, Ether, Litecoin, Dash and ERC20 into Corona Token with the purpose of helping prevent epidemics and early finding out vaccines in the future.

# BLOCKCHAIN TECHNOLOGY SOLUTION

## CORONA TOKEN

Website: <https://corona-virus.io>

Name: **CoronaCrypto**

Token: **NCOR**

Type: **ERC20**

Total Supply: **7.739.879.999 NCOR**

Start Price: **\$0,0025**

Accept Payment: **BTC,ETH,USDT**

# CONCLUSION

Corona is an optimal, simple solution to the transparency of donations and the use of funds in fighting off the epidemic, especially the Corona epidemic. In addition, the project will also support and contribute a fund for research and preparation of vaccines for other dangerous epidemics that affect the global development.
